SMALL WATER SYSTEMS

25. SMALL COMMUNITY WATER SYSTEMS

OVERVIEW

There are a number of mutual water companies (MWCs) and privately-owned water systems providing service within the County. They are an important component in the overall provision of water service in the County, but are not under LAFCO's jurisdiction. Mutual water companies (also called water companies, cooperative company, water system, water association, and water works) are a legal entity with no specific requirement for the size of the system or number of connections. It essentially means that there are shared interests in the water system and service by customers of the system.

Water systems may also be investor owned, meaning that the owners, whether it be an individual or group, are not customers of the water system. These investor owned systems are regulated by the California Public Utilities Commission (CPUC). The focus in this chapter is on community water systems that serve a non-transient residential population.

Various operations and activities of these water systems are regulated by several agencies depending on size (number of connections and population served), water source, and ownership. The primary regulators for health purposes are the County Department of Environmental Health (DEH) for systems consisting of five to 14 connections and the California Department of Public Health (DPH) for systems of greater than 15 connections. Systems of four or less connections are not regulated by a public health agency. A system may be regulated by both CPUC and a public health agency; the two are not mutually exclusive. For more details on the regulation of water systems, refer to the Regulation of Water Providers section in Chapter 2 of this document.

SMALL WATER SYSTEMS IN SANTA CLARA

Per the records of DPH and the Santa Clara County DEH, there are 100 water systems that serve non-transient residential communities in Santa Clara County of five or greater connections. This excludes institutional systems and RV Parks. Of these systems, 60 have five to 14 connections, and 40 with 15 or more connections.

Since 2005, two mutual water companies are no longer in operation. Chiri Ranch Estates MWC split up into individual well connections, and Redwood MWC was purchased by San Jose Water Company in 2006. DPH currently regulates two additional MWCs than in 2005—Valley View Ranches MWC and Emerald Valley Estates MWC.

CPUC regulates four small water systems in Santa Clara County—Mecchi Water Company, Idylwild Water System, Klein Homes Water Company, and Twin Valley Water Company, Inc. The Idylwild Water System suffered a water shortage at the end of 2010 and

had to truck in water from a private provider. The situation is presently stable there, however, the Idylwild Water System is looking to connect to the San Jose Water Company system to prevent another such shortage.

The complete list of current mutual water companies and mutually owned small water systems, their locations, number of connections and regulatory authorities are shown in Figure 25-1.

CONTAMINATION CHALLENGES

Figure 25-2: Contamination in Small Water Systems

All entities extracting groundwater are required to pay the pumping tax imposed by the SCVWD because they benefit from groundwater management services provided by the District. Smaller mutual water companies, privately operated systems, and individual well owners typically do not have the facilities to treat groundwater other than disinfection at the wellhead. When these systems are impacted, they often seek the assistance of a larger public or private provider in the area that could extend service. DPH encourages small water systems to merge with larger providers.

The issue is particularly critical in the South County region where groundwater quality is impacted. perchlorate Although the contamination appears to be lessening, some water systems still face challenges with nitrates and septic systems near their wells. For example, San Martin County District has received inquiries from neighboring mutual water companies that would like to connect their water systems to the District's due to contamination issues.

Note: *Ahove legal limit	Source: The Environmental Working Group			

According to the

Environmental Working Group, a national public health nonprofit, there are a number of small private water systems and mutual water companies in Santa Clara County that have contaminated water supply. Individual systems and specific contaminants that are below legal limit but above the recommended healthy limit are shown in Figure 25-2. There are

four systems that contain contaminants above the legal limit—Vista Grande Water Users Association (Trihalomethanes), Green Acres Mutual Water Company (Asbestos), San Martin Foothills Water Company (Radium-228), and Foothill Mutual Water Company (Nitrate).
